

## ⌚ Privacy Instructions for Webmaster PETER (SoulScript)

### -1. Default Privacy Settings

- All new entries should default to Private (Tucked Away) unless the user explicitly chooses to:
  - Let It Drift (Public – Anonymous)

Label UI clearly so users know what's private and what's shared.

### 2. Entry Visibility Levels

- Private → Only user can view (fully encrypted if possible)
- Semi-Private (Onlookers) → Passive access only, no posting, only:
  - Echo (Like)
  - Whisper (Single-word response)
- Public (Anonymous Community) → Viewable in The Quiet stream, but no user profiles shown.

### 3. Screenshot & Copy Protection (Where Possible)

- On mobile apps, implement OS-level flags to:
  - Block screenshots in “The Quiet” stream (Android: FLAG\_SECURE)
  - Disable copy/paste in public/anonymous entries

> Note: Communicate to users that screenshot blocking is a privacy “layer, not a guarantee.”

### 4. End-to-End Encryption (If Feasible)

- Encrypt Private entries both at rest and in transit.
- Allow users to optionally add passcodes or biometric locks to their Sanctuary (home screen).

## 5. Anonymous Community Protocol

- Strip all identifying data from public entries.
  - No username
  - No timestamp
  - No metadata (e.g. device, location)
- Group posts by emotional thread (#feeling) not by user.

## 6. Echo & Whisper Interaction Limits

- Prevent users from tracing activity back to a specific person.
- No interaction history should lead to account profiles.

## 7. Legacy Mode Privacy

- Legacy entries (e.g., “Dear Mom”, “Dear Me”) should be:
  - Private by default
  - Option to export as a memoir or SoulScript Autobiography
  - Not shareable unless explicitly released by the user

## 8. User Control

- Add a clear “Privacy Center” under Inner Compass (Settings) where users can:
  - Set journaling defaults (private/public/semi)
  - Download or delete data
  - Manage encrypted access

## 9. No Ads / No Tracking

- Assure users there's:

- No third-party ads
- No behavioral tracking or external analytics tied to identity

SoulScript should feel like a sanctuary ,sacred, safe, and emotionally protected. Build privacy into every layer — not just technically, but ethically.
